Heliatos Solar Beach Solar Water Heater Kit

\$755.56

Number of Panels

2 Panels

Our Beach Solar Water Heating Kit comes with all the parts needed to install your solar water heater system on your beach house or beach cabin. As with all our systems, they connect directly to your existing water heater and don't interfere with existing source of heat (gas or electric). This way you can enjoy hot water even during long cloudy periods. Using our MH-38 Solar Water Heater panels you can simply thread the panels together. No more external connection pipes for multi panel installations!

These panels include special features to prevent corrosion even in the harshest environments:

- Powder-coated frame and backing, gives the appearance of white enamel
- Zinc-phosphate internal corrosion protection
- Sealed construction
- Stainless steel hardware

Each panel weighs slightly over 14 lbs. and is 24" by 24" but can still provide you with ample hot water. You can begin your system with a few panels and add more if you need more. With this kit you DO NOT have to solder at all!

Each kit comes with:

- **Your selected quantity of MH-38 Solar Water Heating Panels**

- **ALL the fittings and adapters you need**
- **1 Bottom Feed Connector**
- **1 TopsFlo TD5 stainless steel pump**
- **1 10W PV Panel including wire and PV mounting kit**
- **Instructions for Installation**

All You have to supply is:

- **Fasteners to attach the panels**
- **Tubing or Pipe to connect the panels to the tank**
- **Insulation for the tubing**
- **Your existing water heater**
- **Tools needed for installation**

[Click here](#) to see more info about how many panels you need.

This product fits any existing water heater with a "boiler drain" near the bottom. This includes almost all gas and electric powered residential units.

Please Note - Will NOT work with Marathon Non Metallic (Plastic) Water Heaters.

Made in the USA
